

A \$3 COVID-19 Treatment Glenn Beck Calls 'Miraculous'

As the president continues to be blamed for the inflated number of 200,000 COVID-19 deaths, it's important to remember that the effective treatment of hydroxychloroquine and zinc, which the president supported, was discredited by Dr. Fauci and the media.

Some pharmacists and governors overstepped their authority to go so far as to block the availability of this successful early treatment option which numerous doctors had used effectively. How many deaths could have been prevented? And yet they blame them on the president.

And now an even greater treatment has been discovered that has brought immediate relief to COVID-19 patients with a 0% death rate. We need to pray that this successful treatment will not be hidden or blocked.

Dr. Richard Barlett is a former medical advisor for Governor Rick Perry (R-TX) for seven years and a member of the Texas Health Disparity Task Force. He is a general practitioner and each month works a forty-eight hour shift in the emergency room.

In March, on one such shift, he was praying between patients. Like many of us, he was watching closely the breaking news about COVID-19. During that shift, he had a moment for a brief catnap and woke with a download from heaven of this life-saving protocol.

Since that time, he has treated over 1,000 patients in Texas, many with co-morbidity issues of cancer who were in chemotherapy treatment, heart disease, diabetes, thyroid disease and so on, who all have recovered from COVID-19 quickly. He is now getting calls around the world from

doctor's and patients who have confirmed it works.

"Not only is the treatment safe and effective, but it costs less than the cost of a COVID-19 test," Bartlett says. What's more, it is also a time-tested protocol that has been on the market for 25 years, unlike the unknown of a new vaccine.

The treatment has been used on young and old alike, even on a 2 lb premature baby in the ICU. A grandmother who had a fever as well as a fifty-year history of smoking and chest pains was convinced she would die of COVID-19 after she tested positive. But after the first breathing treatment she could breathe again and recovered entirely.

Another patient, a grandmother who called Dr. Bartlett on a Friday evening said, "I've heard you giving updates for COVID-19 on the radio and for five days now I've been sick in bed, too weak to get out of bed. My fever won't break and I can't sleep. My granddaughter just tested positive for COVID-19 and I'm afraid I have it." The woman also explained she had co-morbidity issues of two forms of lymphoma.

Her oncologist had told her, "Whatever you do, don't get COVID-19." But she did and was in great fear. After receiving one treatment she slept through the night for the first time in five days. Her fever broke over the weekend and she recovered so quickly that she was able to teach eight hours of music lessons to her students via Skype on the following Monday.

"We are not hopeless or helpless, but early treatment is key," Dr. Bartlett explained.

Last week, Dr. Bartlett met with Tennessee Governor Bill Lee. After learning of this information, Lee decided to re-open the state more. Bartlett will be meeting with other governors later this week, sharing this life-saving information that can allow our nation to re-open.

This protocol is an anti-inflammatory medicine that targets the lungs to allow patients to breathe and stops the symptoms.

After conservative political commentator Glenn Beck's wife and kids came down with COVID-19, their family physician reached out to Dr. Bartlett to learn of this protocol. Glenn then began to experience symptoms. Their physician immediately treated them with it and they *all* recovered quickly. In an interview with Dr. Bartlett on his show afterwards, Beck called the treatment "miraculous."

Congressman Louie Gohmert (R-TX) also received this treatment after he tested positive and he also recovered quickly.

"We need to ask ourselves why Taiwan, with a population of over twenty three million, has only twenty four recorded cases of COVID-19. It's because they are using an early treatment protocol of inhaled steroids which parallels what I'm doing," Dr. Bartlett stated. "This same treatment is currently being studied at Oxford, in Australia and France and at the National Institute of Health."

As our President and First Lady have now tested positive, let us continue to pray for them, their staff and any who have been exposed that they will all recover quickly. And may lifesaving treatments such as this no longer be withheld from the American public so that the cure for COVID-19, which is already present, can be received.
