Are the Supposed Health and Safety of Americans Merely Godless Cultural Marxism?

Last September, we quoted Dr. Linda Johnston, MD, as saying, "The coronavirus is about 100 nanometers in diameter. Cloth mask 'holes' are 1,000 times larger than a virus. An analogy is used that a mask is like a mosquito getting through a chain-link fence. It's actually much worse, it's a mosquito getting through a chain-link fence with holes 14 yards in diameter."

An article published through the National Center for Biotechnology Information [NCBI] confirmed Dr. Johnston's conclusion. Established in November 1988, the NCBI is a division of the National Library of Medicine [NLM] at the National Institutes of Health [NIH]. Its mission is to "develop new information technologies to aid in the understanding of fundamental molecular and genetic processes that control health and disease."

A new lunar eclipse or "blood moon" is on the way, set to take place on May 26, 2021, and it will be at least partially visible from eastern Asia, Australia, the Pacific Ocean and much of the Americas.

According to , this “supermoon” full moon will move into Earth’s dark central umbral shadow where it will appear as a “Blood Moon” for 15 minutes, briefly turning the lunar surface a reddish-copper color.
