

Does This 75,000-Mile-Wide Hole on the Sun's Surface Indicate Christ's Return?

NASA says there is a massive sunspot on the surface of our sun that's larger than planet Earth.

The 75,000-mile-wide spot could rapidly turn into a solar flare and disrupt communications across the globe.

The team at *Revelation in the News* says this could be indicative of Christ's return. The fallout could result in one of the horsemen of the apocalypse getting to ride.

They point to Revelation 6:8 as proof:

So I looked, and there was a pale horse, and the name of him who sat on it was Death, and Hades followed him. Power over a fourth of the earth was given to them, to kill with sword, with hunger, with death, and by the beasts of the earth.
