

First of 3 Prophetic Blood Moons Hits This Week, Landing on Jewish Holiday

Some remarkable celestial signs will be on display in the coming months that may hold prophetic significance for our world. This series of four heavenly phenomena includes three lunar events, two of which could represent a possible direct message about Israel.

It all kicks off with a total lunar eclipse known as a “blood moon” that will appear over the U.S. on Mar. 14, 2025. This particular one will fall directly on the Jewish holiday of Purim. That’s when the Jewish people celebrate the biblical account of Esther when they were delivered from annihilation at the hands of an enemy named Haman in the Persian empire, which is modern-day Iran.

That first lunar eclipse will be followed by two more blood moons, with one coming this fall before Rosh Hashanah, and then the third one also falling directly on Purim on Mar. 3, 2026.

Bible prophecy experts say lunar eclipses, known as “blood moons,” are tied to events that affect Israel. And with antisemitism spiking around the globe, the ongoing war with Hamas in Gaza, and the massive Middle East shifts that have followed the Oct. 7, 2023, massacre in Israel, the two Purim blood moons could hold special significance.

Israel is also facing a new era of uncertainty now that its neighbor Syria has fallen into the hands of rebels with ties

to Al Qaeda, as well as Turkey. And some are concerned that Iran could find a way to lash out after seeing its proxy terrorist armies of Hamas and Hezbollah being destroyed by Israel. It's why Israel may feel compelled to act swiftly as rumors abound that Iran is close to completing a nuclear weapon that could be deployed against the Jewish state.

What Is the Significance of a Blood Moon?

A blood moon is a full lunar eclipse in which the moon can appear to be an eerie, blood-red color. Blood moons occur when Earth passes directly between the moon and the sun, preventing the sun from reflecting off the moon and casting a reddish shadow over it.

In the next such event, the moon will turn red for more than an hour over North and South America on Mar. 14.
