

MIT Computer Model Predicts Civilization Will End in 2040

Is humanity approaching a major turning point? A computer model that was originally developed in 1973 by a group of scientists at MIT is warning that things are about to dramatically change. If the computer predictions are accurate, our standard of living will start to decline dramatically around the year 2020, and we will witness the “end of civilization” around the year 2040.

Of course this is not the first time ominous predictions such as this have been made about our future. For years, experts have been warning that we are heading for severe shortages of water, food and oil as our limited natural resources begin to run out. For years, experts have been warning that our economic model is not sustainable and that we are heading for a historic collapse. For years, experts have been warning about the alarming increase in seismic activity all over the planet and about the proliferation of weapons of mass destruction.

Society is crumbling all around us, and the elements for a “perfect storm” are definitely coming together.

So maybe this computer model is on to something.

The name of the computer program is “World One”, and it was originally created by Jay Forrester:

The prediction came from a program nicknamed World One, which was developed by a team of MIT researchers and processed by Australia's largest computer.

It was originally devised by computer pioneer Jay Forrester, after he was tasked by the Club of Rome to develop a model of global sustainability.

However, the shocking result of the computer calculations showed that the level of pollution and population would cause a global collapse by 2040.

The fact that the Club of Rome was behind Jay Forrester's work is a major red flag, because David Rockefeller and other globalists founded the Club of Rome, and it has always been used to further the globalist agenda.

Could it be possible that this computer model is a glimpse into the kind of future that the globalists believe is coming?

According to the model, life as we know it is about to change in a massive way:

At this time the broadcasters address the audience: "At around 2020, the condition of the planet becomes highly critical.

"If we do nothing about it, the quality of life goes down to zero. Pollution becomes so seriously it will start to kill people, which in turn will cause the population to diminish, lower than it was in the 1900.

"At this stage, around 2040 to 2050, civilised life as we know it on this planet will cease to exist."

The computer model appears to be primarily concerned with natural resources, pollution and population levels, but other factors should be considered as well.

In order to have "civilization," people need to behave in a civilized manner, and we see more evidence every day that we are in an advanced state of social decay.

For example, one would think priests would be some of the most well-behaved and "civilized" members of our society, but a new report about clergy child abuse in Pennsylvania is pulling

back the curtain on incredible acts of darkness:

Horrific details have emerged about predatory behavior by priests, including [various sexual acts] one young boy made to pose naked as Jesus while other priests took pornographic pictures and shared them with other clergymen.

A bombshell report by a grand jury in Pennsylvania has extensively detailed for the first time how 300 priests sexually abused more than 1,000 children and how church leaders, some of whom are still alive, covered it up.

Remember, these 300 priests are just from one state. There are countless other incidents of abuse all over the country, and it is a crisis that appears to be escalating.

Earlier today, I came across a story about a 22-year-old man in Michigan who approached a group of young girls in a forceful manner, but fortunately they were able to fight him off:

Four Michigan girls successfully fought off a man who allegedly intended to kidnap and have sex with one of them by punching him and flinging hot coffee in his face.

Bruce Hipkins, 22, of Tuscola County, Michigan, was charged with kidnapping, unlawful imprisonment, assault and battery and criminal sexual conduct charges following the incident which occurred Friday night.

The thin veneer of civilization that we all take for granted on a daily basis is wearing very thin, and it is all that really separates us from societal collapse, chaos and anarchy.

Ultimately, a computer model from 1973 is probably not going to be the best guide, but I do agree that enormous societal changes are heading our way very rapidly.

In fact, I wrote an entire novel about what America will start to look like as those societal changes begin to accelerate. I am more convinced than ever that America is heading for a "perfect storm" that will bring us to our knees, but most Americans appear to have bought into the fiction that everything is going to be okay somehow even though it is exceedingly clear that virtually nothing about our society is sustainable over an extended period of time. A day of reckoning is inevitably coming, and even a computer model from 1973 can see that.

For those of you who have stopped, it is time to start prepping again. A major international debt crisis has started, war almost erupted in the Middle East last week, and civil unrest is starting to erupt in major cities all across America.

I believe we are going to witness bigger changes over the next two years than we have over the last 10 years combined. The clock is ticking, and America's date with destiny is fast approaching.

As always, let us hope for the best, but let us also get prepared for the worst.
