

# **New Weapons for a New Threat: How AI, Robots and Deepfakes Will Change Everything**

By Todd Coconato

In our rapidly advancing digital age, technologies such as artificial intelligence robots, deepfakes and other innovations are poised to be game changers in how we live, work and perceive the world around us. These advancements present both unprecedented opportunities and significant challenges. For the people of God and the church, it is crucial to be proactive rather than reactive in addressing these changes.

## **The Implications of Technological Advancements**

AI robots and deepfakes represent just a fraction of the transformative technologies emerging today. AI robots are becoming more sophisticated, and capable of performing tasks that were once thought to be exclusive to humans. Deepfakes, on the other hand, can create highly realistic but false representations of individuals, which can be used to spread misinformation and create confusion.

These technologies have the potential to revolutionize industries, enhance productivity and create new forms of engagement and interaction. However, they also pose ethical dilemmas, such as privacy concerns, the spread of false information and the potential for major misuse and far more nefarious things as well.

## **A Proactive Approach for the Church**

In today's episode of "Firepower," Mario Murillo and Todd Coconato passionately discuss the need for the church to get ahead of these technological advancements. They argue that the church must take a proactive stance and understand the challenges and threats they pose on several fronts.

Historically, the church has often been slow to understand and combat the plan of the enemy to utilize these types of things, and it's critical that we address the ethical and practical implications of these emerging technologies. With AI and deepfakes, there is a unique opportunity to break this cycle and lead the conversation about their use and implications.

## **The Importance of Ethical Engagement**

Mario Murillo and Todd Coconato highlight the importance of the church being a moral and ethical guide in the use of these technologies. AI and deepfakes can be powerful tools for spreading the gospel and engaging with a global audience, but they also will bring new threats and ways for the enemy to attack and further entangle people into sinful activities. Immersive technologies can be extremely dangerous when it comes to pyrography and blurring the lines of reality. With so many Christians already struggling with internet porn, how much worse will this get when people actually consider having relationships with and even marrying robots? How will the church address this and the emergence of transhumanism?

It is crucial that these technologies are used with integrity, ensuring that the content remains true to the teachings of the Bible and that privacy and security are maintained. Some are suggesting that AI could be used to write a "new bible" and even impose a new world religion. This is highly concerning and sounds very similar to what the Bible depicts will happen in the last days.

Is this the beginning of the beast system? Will the globalists and elites try and introduce a new one-world religion in the next few years? Could technologies such as central bank digital currencies be used to initiate the mark of the beast? These are important questions that must be addressed.

## **Why You Need to Watch 'Firepower'**

In this episode of "Firepower," Murillo and Coconato delve into the potential impacts of these technologies on the church and society. They discuss how the church can harness these advancements for good while also addressing the very serious concerns that come with them. You may not hear a conversation like this one anywhere else!

Their conversation is a call to action for the church to become informed and proactive. By understanding these technologies, the church can better navigate the future, using these tools to spread the gospel and serve the community more effectively.

As we stand at the threshold of a new technological era, the call to the people of God is clear: We must be vigilant, informed and proactive. The church has the opportunity to lead by example, demonstrating how to use powerful technologies ethically and effectively. Let us embrace these tools with faith and foresight, using them to glorify God and advance His kingdom on earth.
