

Unusual Phenomena Unfolding in the Night Sky

OK, this is starting to get really weird.

At the same time that the Middle East is erupting in flames, the U.S. is being pummeled by major natural disasters and we are preparing for the most pivotal election in modern history, extremely unusual things are happening in the heavens. The “Comet of the Century” is making a spectacular run past our planet, the sun has unleashed an extremely powerful coronal mass ejection, a “second Moon” is now orbiting our world, and it is being suggested that we are witnessing an “intriguing alignment of constellations and stars” that appears to relate to events written in the book of Revelation. Are we really supposed to believe that it is just a “coincidence” that all of these things are occurring simultaneously?

According to ABC News, Comet Tsuchinshan-Atlas will be closest to our planet on Saturday, Oct. 12.

Prepare to spot a rare, bright comet.

The space rock is slinging toward Earth from the outer reaches of the solar system and will make its closest pass on Saturday. It should be visible through the end of October, clear skies permitting.

As I have discussed previously, something else will also be happening on Saturday.

Yom Kippur begins at sundown on Friday, and it lasts until sundown on Saturday.

Yeah, I suppose that is just another “coincidence” too.

The comet is about two miles wide, but NPR is reporting that the tail of the comet “extends for tens of millions of miles.”

A comet discovered last year—known as C/2023 A3 Tsuchinshan-ATLAS—is set to make a close approach to Earth in the coming days.

The snowy dirtball is nearly two miles in diameter and its tail of dust and gasses extends for tens of millions of miles, Bill Cooke, lead of NASA’s Meteoroid Environment Office at the Marshall Space Flight Center in Huntsville, Alabama, told NPR.

You will be able to view this comet with the naked eye, but if you have a pair of binoculars you will be able to see what is taking place in spectacular detail.

The comet will initially appear low on the western horizon in the glow of twilight about 45 minutes after sunset each day starting Saturday, Oct. 12, through the end of the month, Cooke said.

The comet can be seen without special equipment but the best view will be through a pair of binoculars.

“Comets look okay to the unaided eye, but with a pair of binoculars, they’ll knock your socks off,” Cooke said. “It’ll be really good in a pair of binoculars. So, if you got a pair of binoculars, why don’t you bring those along and take a look at the comet.”

Amazingly, this comet is making a run past our planet at the same time that something truly unique is happening among the stars.

The following comes from an article that was just authored by

journalist Troy Anderson.

On the day I write this, Oct. 9, 2024, a particular video has caught my attention. It explores an intriguing alignment of constellations and stars, drawing parallels to the descriptions found in the book of Revelation.

According to the video, this date may involve a celestial event that mirrors what the apostle John described in his prophetic vision on the Isle of Patmos nearly 2,000 years ago.

Many have written books about how the stars literally foreshadowed the birth of Christ over 2,000 years ago.

Could it be possible that God is using the stars to warn us about what is coming in our time?

According to Anderson, “a rare alignment of planets and stars” appears to depict “the four horsemen of the apocalypse and the great red dragon.”

The video suggests that on Oct. 9, there will be a rare alignment of planets and stars that matches descriptions from the book of Revelation, including the symbolism of the four horsemen of the apocalypse and the great red dragon. If these interpretations hold any weight, then this date might represent a significant marker in the prophetic timeline. As a journalist and researcher of biblical prophecy, I find it worth exploring whether such signs could indeed be an indication of the times we’re living in, especially following the Great North American Eclipse on Apr. 8, 2024, which I wrote about in an article for Charisma.

I am so glad that he linked what is happening now with the eclipse that happened on Apr. 8, because I am entirely convinced that they are very closely related.

Meanwhile, the Sun continues to behave very erratically.

We are being told that a “fast-moving coronal mass ejection” was unleashed on Tuesday night, and that caused NOAA’s Space Prediction Center to issue a G4 geomagnetic storm watch.

A “severe” solar storm could make the northern lights visible in the U.S. farther south than usual while also posing the potential to disrupt modern technology, according to the National Oceanic and Atmospheric Administration.

A fast-moving coronal mass ejection—a powerful burst of magnetized plasma from the sun’s corona—erupted from the sun on Tuesday night, prompting NOAA’s Space Prediction Center to issue a rare G4 geomagnetic storm watch, indicating “detrimental impacts” to critical technology and possible widespread voltage control problems, according to NOAA.

The CME is expected to cause a moderate solar storm here on Earth on Thursday and Friday, according to NOAA.

On top of everything else, our planet has now acquired a second Moon.

That’s right, for a little while, a “temporary mini-moon” will be orbiting our planet.

Over the past few weeks, you’ve probably heard somewhere that Earth was going to get a second moon. Well, we can now confirm that Earth now officially has two moons after capturing asteroid 2024 PT5.

On Sunday, Sept. 29, our planet captured the tiny asteroid named 2024 PT5, turning it into a temporary mini-moon.

Needless to say, the vast majority of the population is paying very little attention to what is going on in the heavens.

And hardly anyone believes that the very strange things that are taking place in the sky have any real significance.

But as I have documented, in Genesis chapter 1 God told us that one of the primary reasons why He created the Sun, Moon and stars was because He planned to use them as “signs,” and He has been doing that all throughout human history.

Now it is happening again, and most people are completely missing it.
