

America Rocked by Disasters Following Historic Memorandum Signing: Coincidence or Something More?

Why isn't anyone else writing about this? On Wednesday, the Memorandum of Understanding was signed by the presidents of the United States and Iran. Meanwhile, major disasters were breaking out all over America. Is this just some sort of really bizarre coincidence, or is something else going on here? Read the evidence that I have compiled below and decide for yourself.

On Wednesday, the very first named storm of the season, Tropical Storm Arthur, suddenly formed and slammed into the Texas coastline.

Tropical Storm Arthur made landfall along the coast of Texas on Wednesday, and as the first storm of the Atlantic hurricane season, it is bringing significant flooding and severe weather to the Gulf Coast.

Arthur formed on Wednesday after a sprawling area of showers and thunderstorms over Texas tracked over the warm waters of the Gulf, which helped it organize and strengthen. Hours later, the center of the storm moved inland over the Texas coast.

In 2025, only one named storm hit the U.S. the entire year.

And it is very rare for a named storm to make landfall this early.

As this storm travels east, it is expected to bring "extreme" flooding to Louisiana, Mississippi, Alabama and the Florida

Panhandle.

As many as 40 million people across eight states are in the deadly path of Tropical Storm Arthur after the first named storm of hurricane season made landfall Wednesday night.

Arthur, which has been downgraded to a post-tropical cyclone on Thursday, slammed into the Texas Coast last night, and is now projected to barrel across the South, bringing severe flooding from Louisiana to the Carolinas.

Meteorologists with AccuWeather warned that Louisiana, Mississippi, Alabama and the Florida Panhandle will see 'extreme' levels of flooding along the coast and in urban areas throughout Thursday, with as much as 12 to 18 inches of rain falling.

Then on Friday, it is being projected that this storm will bring "life-threatening flooding" to Georgia and the Carolinas.

Georgia and the Carolinas are expected to be impacted on Friday, as forecasters say Arthur will continue to bring 'life-threatening flooding, property damage and disruptions to commerce and travel.'

AccuWeather meteorologist Alex Duffus warned in a statement: 'Heavy rainfall will be fueled by tropical moisture, delivering rainfall rates of 2-4 inches per hour across portions of the Gulf Coast.'

However, flooding is not the only concern tied to Arthur, as the National Weather Service has also issued a widespread tornado watch across coastal areas in Louisiana, Mississippi, Alabama and the Florida Panhandle.

Tropical Storm Arthur formed and made landfall on the exact same day that the Memorandum of Understanding was signed by

the presidents of the United States and Iran.

This storm is going to cause a massive amount of damage all the way from Texas to the Carolinas.

Is this just a coincidence?

I don't think so.

Also on Wednesday, a series of extremely violent tornadoes suddenly broke out in the Midwest and the Southeast.

At least seven tornadoes broke out Wednesday night across the Midwest and Southeast, as severe weather descended on a large swath of the country.

According to the National Weather Service, a confirmed tornado was reported near the small northeast Iowa community of Harpers Ferry at 5:10 p.m., while a second confirmed tornado rolled through Charleston in central Illinois at about 6:40 p.m. local time.

Both tornadoes were flagged by the weather service as a "particularly dangerous situation," a rare designation used by the weather service for environments in which "strong and violent tornadoes" are possible.

The town of Charleston, Illinois was hit particularly hard.

At one point, a trailer was actually picked up and torn away from its foundation.

Photos and videos obtained by CBS News showed extensive damage to homes and buildings in Charleston, where a mess of downed trees and power lines covered the streets. Emergency responders in the city could also be heard in dispatch audio

describing some of the treacherous scenarios they encountered, including multiple overturned semitrucks and a trailer that had been torn from its foundation, possibly with someone inside.

Hail measuring between and 3 inches was also reported in Charleston and surrounding parts of Illinois, where powerful winds at times climbed as high as 78 mph, according to the weather service.

Is it just another coincidence that this also occurred on Wednesday?

As you can see, the “coincidences” are starting to pile up.

Let me give you another one.

An enormous wildfire in eastern Washington state that is being driven by very high winds caused all sorts of chaos on Wednesday.

High winds drove a wildfire into an eastern Washington neighborhood, forcing the evacuation of about 1,500 people and destroying at least 15 homes, officials said Wednesday.

The Spokane County Sheriff's Office announced Wednesday that its forensic unit found what appeared to be human remains inside a home destroyed in the fire. A family member had requested a wellness check because one of the residents had refused to evacuate and could not be reached, officials said in a news release.

Of course the skeptics will insist that this is yet another coincidence.

Meanwhile, the screwworm plague that just broke out in the Southwest just continues to pop up in even more Texas counties.

Screwworm cases are rising in the US as the outbreak spreads beyond the initial contamination zones.

Twelve animal cases have been confirmed so far, a significant increase from the first case detected in a calf in south Texas on 3 June. The growing number of infections has alarmed agricultural experts, who warn that a wider outbreak could have serious consequences for the Texas beef industry.

Of the 12 reported cases, 11 remain active and one is inactive, according to an update issued last Thursday by the US Department of Agriculture's animal and plant health inspection service. The most recent case was reported on 12 June in Sutton county in west Texas, where a sheep was discovered with the infection. Other cases have been identified in the Texas counties of Edwards, Tom Green, Gillespie, La Salle and Zavala, as well as in Lea county, New Mexico.

And just within the last 24 hours, we have officially hit "tank bottoms" in Cushing, Oklahoma.

As I discussed yesterday, once we get below 20 million barrels of oil at Cushing, there won't be enough pressure in the pipelines to keep operating.

So this is it.

At the same time, fish are literally being cooked to death in lakes and rivers all over the country.

A team of contractors spent their weekend hauling thousands of dead fish carcasses from the waters of Minnesota's Como Lake, the Minnesota Star Tribune reported on Tuesday. Located in a suburban park in St. Paul, the lake is now down about 1,000 bluegill and crappies, which died en masse as a result of low oxygen – a side effect of a rapid influx of heat.

Down south in Arizona, state wildlife officials closed public

access to San Carlos Lake indefinitely after drought conditions and a nearby dam release “resulted in a major fish kill affecting approximately 100 percent of the fish population.” Across the country in Massachusetts, the Charles River was the site of a massive die-off of carp after a pre-summer heat wave baked fish exhausted from spawning.

This is happening even though summer has not even officially begun yet.

That is certainly not a good sign.

And now a “Super El Niño” has begun.

The forecasted El Niño—a mysterious but well-documented climate phenomenon—has officially begun, the National Oceanic and Atmospheric Administration (NOAA) announced on June 11. Meteorologists expect it to evolve into one of the most powerful ones on record, and the event will likely bring about extreme weather worldwide and consequently affect the economy.

If you believe that it is just a “coincidence” that all of the things that I have shared in this article are happening simultaneously, that is okay.

We will just have to agree to disagree.

Personally, I am convinced that what we are currently experiencing is yet more evidence that history is taking us in a very particular direction.

So many prominent voices are crying out “peace and safety”, but the truth is that apocalyptic times are upon us.

Global events have been spinning out of control for quite some time now, but what we have been through so far is not even worth comparing to what is eventually coming.
