

Cloud Seeding, Mars and AI: What You Need to Know

Discussions about cloud-seeding, Mars and artificial intelligence at one time may have been far from any of our minds. However, weather control, space exploration and technology have become greater realities in our world than any of us ever could have imagined.

In a recent livestream, Bishop Alan DiDio discussed these topics and how we should view them from a biblical perspective.

Evaluating a video posted to X of a local news station that detailed what cloud-seeding is, creating more particles in the air to lower the atmosphere to increase chances of rain and snow, DiDio points out the bigger question: what else is being done to our atmosphere?

“...cloud seeding is a real thing,” says DiDio. “The question is what else are they putting in the atmosphere? What else are they putting in the air? Weather modification has been a thing they’ve been working on since the first World War. It’s believed we saw it heavily in Vietnam and that it is continued unto this day.”

DiDio points out that weather manipulation goes further, darker and deeper than the surface level.

“They also have ways of controlling tsunamis,” he says.

DiDio also shared a clip that is believed to be video footage of Mars. The question he poses is: can we really trust that social media has given us actual footage of the planet?

“[There is a] lot of speculation about this. Is this really from Mars?” he says.

It may be difficult to decipher if footage like this is real or not because it truly is becoming harder to discern what is and is not created by artificial intelligence. As AI continues to advance, we very well could be on the precipice of a new era.

/**/

DiDio and his son, Evan, examined a clip from X of Jensen Huang, the CEO of Nvidia, sharing a stage with humanoid robots.

“The ChatGPT moment for general robotics is just around the corner,” Huang says.

ChatGPT has taken the world by storm, radically altering how we write, compose thoughts and questions, create images and how we view the world. If the world of robotics is close to having a ChatGPT moment, then this means that the structure of society itself could be on the verge of changing forever.

No matter what kind of strange, technological changes we see happen around us, we are called to stick close to the truth of the gospel and continue to share the Good News of Jesus Christ with those around us.
