

How Israel Is Helping Save the Seas

Israel is working to keep the earth's oceans clean and preserve them for the benefit of mankind.

With an entry to the Indian Ocean in its south, and a gateway to the Atlantic Ocean on its Western coast, Israel connects with the rest of the globe through its maritime borders.

Israel is thus dedicated to promoting cleaner seas, which are essential for humanity. Indeed, Israel has made it a national goal to protect its waterways.

Israel conducts scientific research in the fields of oceanography and marine biotechnology, generating knowledge to protect marine habitats and water resources.

Israel also shares the global community's commitment to conserving the oceans and seas.
