

# Is Hurricane Irma the Next Step to Fulfill Eclipse Prophecy?

When the solar eclipse crossed over the continental United States two weeks ago, it was immediately followed by a hurricane of epic proportions in a manner that conformed precisely to prophetic sources. Two weeks ago, a rare solar eclipse transversed the U.S., the first time in 99 years such an event had occurred. Four days later, Hurricane Harvey hit Texas. The connection between the eclipse and the hurricane was implicit in how events unfolded.

When the eclipse's path of totality passed out to sea over the Atlantic Ocean, it crossed over three storm systems. At the meteorologists stated that "the odds for development of those systems is very low," but one of the systems revealed itself to be far more than the scientists anticipated. One of the systems touched by the dark path of the eclipse was the now infamous Hurricane Harvey, currently the second-most costly natural disaster in U.S. history.
